## Week 6 clicker questions

In central-force motion, the areal velocity is a constant  $= \frac{\ell}{2\mu}$

What is the period  $\tau$  of an elliptical orbit with area  $A$ ?

- A.  $\tau = \frac{\ell}{\mu} A$
- B.  $\tau = \frac{\ell}{2\mu} A$
- C.  $\tau = \frac{\mu}{\ell} A$
- D.  $\tau = \frac{2\mu}{\ell} A$

Kepler's First Law states that planets move in elliptical orbits with the sun at one focus.

Why is the sun at one focus of the orbit?

Because...

- A. Otherwise the planets wouldn't all be in the same orbital plane.
- B. In two-body central-force motion one mass is always at the focus on the orbit.
- C. In two-body central-force motion the center of mass is always at the focus of the orbit, and the center of mass position is approximately given by the position of the sun.
- D. The moon is at the other focus.

A system of  $n$  particles is described by the masses and positions of each particle:  $m_\alpha, \mathbf{r}_\alpha$

$$M = \sum_{\alpha} m_{\alpha}$$

What is the position of the center of mass  $\mathbf{R}$  of the system?

A.  $\mathbf{R} = \frac{1}{M} \sum_{\alpha} \mathbf{r}_{\alpha}$

B.  $\mathbf{R} = \frac{1}{M} \sum_{\alpha} m_{\alpha}$

C.  $\mathbf{R} = \sum_{\alpha} m_{\alpha} \mathbf{r}_{\alpha}$

D.  $\mathbf{R} = \sum_{\alpha} M \mathbf{r}_{\alpha}$

E.  $\mathbf{R} = \frac{1}{M} \sum_{\alpha} m_{\alpha} \mathbf{r}_{\alpha}$

Consider particles  $\alpha$  and  $\beta$ , and the internal force  $\mathbf{f}_{\alpha\beta}$  = the force on particle  $\alpha$  due to particle  $\beta$ .

How does Newton's third law relate the internal forces?

A.  $\mathbf{f}_{\alpha\beta} = \mathbf{f}_{\beta\alpha}$

B.  $\mathbf{f}_{\alpha\beta} = -\mathbf{f}_{\beta\alpha}$

C.  $\mathbf{f}_{\alpha\beta} = -\mathbf{f}_{\alpha\beta}$

D.  $\mathbf{f}_{\alpha\beta} = \mathbf{f}_{\beta\alpha} = 0$

E.  $\mathbf{f}_{\alpha\beta} + \mathbf{f}_{\beta\alpha} = 1$

Suppose a system of particles experiences only internal forces (no external forces).

What can you say about the momentum of the system?

- A. Nothing – having no external forces doesn't determine the momentum of the system.
- B. The momentum of each particle is constant.
- C. The momentum of some (but not all) of the particles is constant.
- D. The momentum of the center of mass of the system is constant.

Wednesday clicker questions

A chain with length  $b$  and mass density  $\rho$  is initially attached at both ends. One end of the chain is cut. After this falling end has moved down a distance  $x$ , what is the mass of the right (falling) side of the chain?

A.  $m_{\text{right}} = \frac{\rho}{2}(b - x)$

B.  $m_{\text{right}} = \frac{\rho}{2}(b + x)$

C.  $m_{\text{right}} = \rho(b + x)$

D.  $m_{\text{right}} = \rho(b - x)$

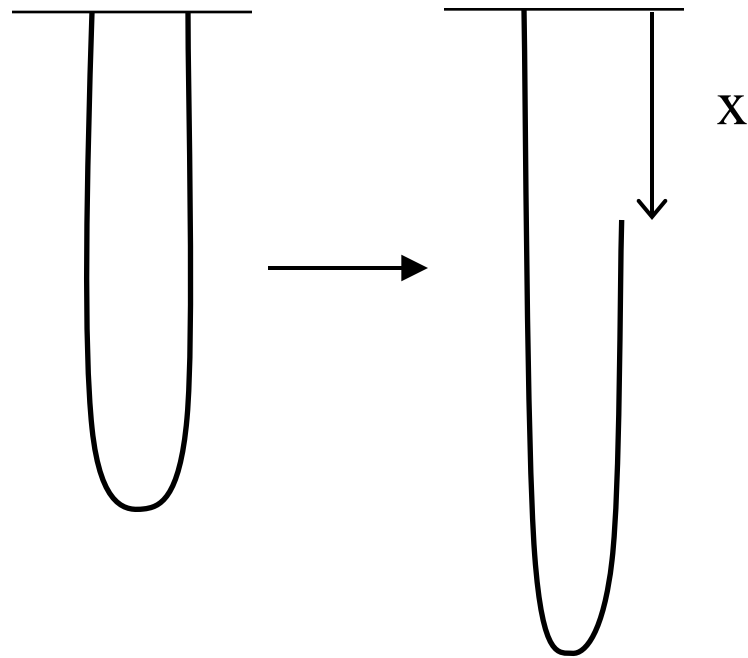

E.  $m_{\text{right}} = \rho b$

A chain with length  $b$  and mass density  $\rho$  is initially attached at both ends. One end of the chain is cut; the other end of the chain experiences a tension  $T$ . As the chain falls, what is the total external force on the chain (in the  $x$  direction)?

- A.  $F = T$
- B.  $F = Mg$
- C.  $F = Mg + T$
- D.  $F = Mg - T$

A chain with length  $b$  and mass density  $\rho$  is initially attached at both ends. The height is measured by  $x$  (increasing down) and the potential energy is zero at the attachment point. What is the total potential energy of the chain?

A.  $U = -\rho gb$

B.  $U = \rho gb$

C.  $U = \frac{-\rho gb^2}{2}$

D.  $U = \frac{\rho gb^2}{2}$

E.  $U = \frac{-\rho gb^2}{4}$

A system of  $n$  particles is described by the masses and positions of each particle, relative to the center of mass:  $m_\alpha, \mathbf{r}'_\alpha$

What can you say about the quantity  $\sum_\alpha m_\alpha \mathbf{r}'_\alpha$  ?

A.  $\sum_\alpha m_\alpha \mathbf{r}'_\alpha = 0$

B.  $\sum_\alpha m_\alpha \mathbf{r}'_\alpha > 0$

C.  $\sum_\alpha m_\alpha \mathbf{r}'_\alpha < 0$

D.  $\sum_\alpha m_\alpha \mathbf{r}'_\alpha = \text{the position of the CM}$

Friday clicker questions

Consider particles  $\alpha$  and  $\beta$ ; the internal force  $\mathbf{f}_{\alpha\beta}$  = the force on particle  $\alpha$  due to particle  $\beta$ ; the position vector  $\mathbf{r}_{\alpha\beta}$  = the vector from particle  $\alpha$  to particle  $\beta$ . If the force between the two particles is central, what can you say about  $\mathbf{r}_{\alpha\beta} \times \mathbf{f}_{\alpha\beta}$ ?

A. Nothing.

B.  $\mathbf{r}_{\beta\alpha} \times \mathbf{f}_{\alpha\beta} > 0$

C.  $\mathbf{r}_{\beta\alpha} \times \mathbf{f}_{\alpha\beta} = 0$

D.  $\mathbf{r}_{\beta\alpha} \times \mathbf{f}_{\alpha\beta} < 0$

A system of  $n$  particles is described by the masses and positions of each particle, relative to the center of mass:  $m_\alpha, \mathbf{r}'_\alpha$   
The squared velocity of each particle is therefore

$$v_\alpha^2 = \dot{\mathbf{r}}_\alpha'^2 + 2\dot{\mathbf{r}}_\alpha' \cdot \dot{\mathbf{R}} + \dot{\mathbf{R}}^2 = v_\alpha'^2 + 2\dot{\mathbf{r}}_\alpha' \cdot \dot{\mathbf{R}} + V^2$$

What is the total kinetic energy of the system?

- A.  $T = \frac{1}{2} \sum_\alpha m_\alpha v_\alpha'^2 + \frac{1}{2} \sum_\alpha m_\alpha v_\alpha' V + \frac{1}{2} M V^2$
- B.  $T = \frac{1}{2} \sum_\alpha m_\alpha v_\alpha'^2 + \sum_\alpha m_\alpha v_\alpha' V + \frac{1}{2} M V^2$
- C.  $T = \frac{1}{2} \sum_\alpha m_\alpha v_\alpha'^2 + \frac{1}{2} M V^2$
- D.  $T = \frac{1}{2} \sum_\alpha m_\alpha (v_\alpha' + V)^2$

The work done in unwrapping a rope from a cylinder is given by

$$W = \int_0^{R\theta} \rho g \left[ x - R \sin\left(\frac{x}{R}\right) \right] dx$$

What is the total work done?

A.  $W = \rho g R \left( \frac{\theta^2}{2} + \cos\theta - 1 \right)$

B.  $W = \rho g R^2 \left( \frac{\theta^2}{2} + \cos\theta - 1 \right)$

C.  $W = \rho g R^2 \left( \frac{\theta^2}{2} + \cos\theta \right)$

D.  $W = \rho g R^2 \left( \frac{\theta^2}{2} + \frac{\cos\theta}{R} - 1 \right)$

What is the total kinetic energy of the rope-cylinder system?

A.  $T = \frac{1}{2}\rho R(2\pi - \theta)R^2\dot{\theta}^2 + \frac{1}{2}MR^2\dot{\theta}^2$

B.  $T = \frac{1}{2}\rho R(2\pi - \theta)R\dot{\theta}^2 + \frac{1}{2}MR\dot{\theta}^2$

C.  $T = \frac{1}{2}(m + M)R\dot{\theta}^2$

D.  $T = \frac{1}{2}(m + M)R^2\dot{\theta}^2$
