

4.8

A solid non-conducting dielectric rod has been injected ("doped") with a fixed, known charge distribution  $\rho(s)$ . (The material responds, polarizing internally)

When computing  $D$  in the rod, do you treat this  $\rho(s)$  as the "free charges" or "bound charges" ?

- A) "free charge"
- B) "bound charge"
- C) Neither of these -  $\rho(s)$  is some combination of free and bound
- D) Something else.

---

---

---

---

---

---

4.6

A very large (effectively infinite) capacitor has charge  $Q$ . A neutral (homogeneous) dielectric is inserted into the gap (and of course, it will polarize) .

We want to find  $D$  *everywhere*.

Which equation would *you* head to first?

i)  $\vec{D} = \epsilon_0 \vec{E} + \vec{P}$

ii)  $\oint \vec{D} \cdot d\vec{a} = Q_{\text{free}}$

iii)  $\oint \vec{E} \cdot d\vec{a} = Q / \epsilon_0$

- A) i    B) ii    C) iii
- D) More than one of these would work OK.

---

---

---

4.6

An ideal (large) capacitor has charge  $Q$ .

b

A neutral dielectric is inserted into the gap (and of course, it will polarize)

We want to find  $E$  *everywhere*

(i)  $\mathbf{D} = \epsilon_0 \mathbf{E} + \mathbf{P}$

(ii)  $\oint \vec{D} \cdot d\vec{A} = Q_{\text{free}}$

(iii)  $\oint \vec{E} \cdot d\vec{A} = Q / \epsilon_0$

Which equation would *you* go to first?

- A) i    B) ii    C) iii
- D) Your call: *more than 1* of these would work!
- E) *Can't* solve, unless know the dielectric is linear!

---

---

---

---

---

---

---

---

Linear Dielectric:

$$\mathbf{P} = \epsilon_0 \chi_e \mathbf{E}$$

$\chi_e$  is the "Electric Susceptibility"

$$\mathbf{D} = \epsilon_0 \mathbf{E} + \mathbf{P}$$

$$= \epsilon_0 (1 + \chi_e) \mathbf{E}$$

$$\equiv \epsilon_0 \epsilon_r \mathbf{E}$$

$\epsilon_r$  is the *dielectric constant*

MD8-4

An ideal (large) capacitor has charge  $Q$ .  
A neutral linear dielectric is inserted into the gap.  
We want to find  $\mathbf{D}$  in the dielectric.

$$\oiint \vec{D} \cdot d\vec{a} = Q_{free}$$

For the Gaussian pillbox shown,  
what is  $Q_{free, enclosed}$ ?

- A)  $\sigma A$       B)  $-\sigma_B A$       C)  $(\sigma - \sigma_B)A$   
D)  $(\sigma + \sigma_B)A$       E) Something else

---

---

---

---

---

---

---

---

MD8-4

An ideal (large) capacitor has charge  $Q$ .  
A neutral linear dielectric is inserted into the gap.  
We want to find  $\mathbf{D}$  in the dielectric.

$$\oiint \vec{D} \cdot d\vec{a} = Q_{free}$$

For the Gaussian pillbox shown,  
what is  $Q_{free, enclosed}$ ?

- A)  $\sigma_f A$       B)  $-\sigma_B A$       C)  $(\sigma_f - \sigma_B)A$   
D)  $(\sigma_f + \sigma_B)A$       E) Something else

---

---

---

---

---

---

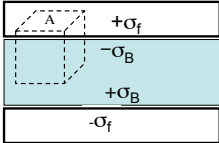

---

---

MD8-4 An ideal (large) capacitor has charge  $Q$ .  
 A neutral linear dielectric is inserted into the gap.  
 We want to find  $\mathbf{D}$  in the dielectric.

$\oiint \vec{D} \cdot d\vec{a} = Q_{free}$

Is  $\mathbf{D}$  zero INSIDE the metal?  
 (i.e. on the top face of our cubical Gaussian surface)

A) It must be zero in there  
 B) It depends  
 C) It is definitely NOT zero in there...

---

---

---

---

---

---

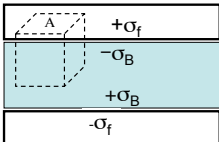

---

---

MD8-4 An ideal (large) capacitor has charge  $Q$ .  
 A neutral linear dielectric is inserted into the gap.  
 We want to find  $\mathbf{D}$  in the dielectric.

$\oiint \vec{D} \cdot d\vec{a} = Q_{free}$

What is  $|\mathbf{D}|$  in the dielectric?

A)  $\sigma_f$       B)  $2\sigma_f$       C)  $\sigma_f/2$   
 D)  $\sigma_f + \sigma_b$       E) Something else

---

---

---

---

---

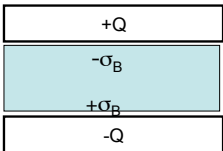

---

---

---

4.6d An ideal (large) capacitor has charge  $Q$ .  
 A neutral linear dielectric is inserted into the gap.  
 Now that we have  $\mathbf{D}$  in the dielectric,  
 what is  $\mathbf{E}$  inside the dielectric ?

A)  $\mathbf{E} = \mathbf{D} \epsilon_0 \epsilon_r$   
 B)  $\mathbf{E} = \mathbf{D}/\epsilon_0 \epsilon_r$   
 C)  $\mathbf{E} = \mathbf{D} \epsilon_0$   
 D)  $\mathbf{E} = \mathbf{D}/\epsilon_0$   
 E) Not so simple! Need another method

---

---

---

---

---

---

---

---

Linear Dielectric:

$$\mathbf{D} = \epsilon_0 \epsilon_r \mathbf{E}$$

$\epsilon_r$  is the *dielectric constant*

---

---

---

---

---

---

---

---

4.6e An ideal (large) capacitor has charge Q.  
A neutral *linear* dielectric is inserted into the gap (with given dielectric constant)  
Now that we have  $\mathbf{D}$  in the dielectric,  
what is  $\mathbf{E}$  in that small gap above the dielectric ?

A)  $\mathbf{E} = \mathbf{D} \epsilon_0 \epsilon_r$   
 B)  $\mathbf{E} = \mathbf{D} / \epsilon_0 \epsilon_r$   
 C)  $\mathbf{E} = \mathbf{D} \epsilon_0$   
 D)  $\mathbf{E} = \mathbf{D} / \epsilon_0$   
 E) Not so simple! Need another method

+Q
- $\sigma_B$
+ $\sigma_B$
-Q

---

---

---

---

---

4.6f An ideal (large) capacitor has charge Q.  
A neutral linear dielectric is inserted into the gap (with given dielectric constant)

Where is  $\mathbf{E}$  discontinuous?

i) near the free charges on the plates  
 ii) near the bound charges on the dielectric surface

A) i only      B) ii only  
 C) both i and ii (but nowhere else)  
 D) both i and ii but also other places  
 E) none of these/other/???

+Q
- $\sigma_B$
+ $\sigma_B$
-Q
