

Physics 3330: Electronics for the Physical Sciences -Fall 2014

Instructors: Noah Finkelstein, Office: Gamow F-1021
Office hours: Wed 2-3p
and by appointment.
finkelsn@colorado.edu,

Heather Lewandowski, Office: JILA X-435
Office hours: Tues 2-3p, Wed 1-2p
and by appointment
lewandoh@colorado.edu

Kevin Stenson : F-317 Gamow Tower
Office Hours: Thurs 10-11a and by appointment
kevin.stenson@Colorado.EDU

LA: Skip Woody, Lab Extra Hours Fridays 2-5p, Doyle.Woody@colorado.edu

Grader: Holly Leopardi Holly.Leopardi@Colorado.EDU

Lab Coordinator: Mike Thomason, Office: Duane G-2B78
thomason@colorado.edu Phone: 303-492-7117

Course Webpage: <http://www.colorado.edu/physics/phys3330>

Introduction: This course is designed to be a rewarding, challenging, creative, and even fun experience. It will provide you a deep introduction to electronics and to experiential design/modeling, using electronics. Modern physical measurements, communication, and computation rely on electronic hardware and instrumentation. Electronic instrumentation is used in all sub-fields of physics, including condensed matter, elementary particles, nuclear physics, and atomic/molecular/optical physics. Electronic measurements are no less common in the other physical sciences, and are essential in many modern interdisciplinary areas such as satellite-based environmental monitoring, the experimental study of chaos, nanotechnology, and the search for extraterrestrial life.

Electronics for the Physical Sciences provides an introduction to electronic design through hands-on experimentation. You will be building electronic systems from scratch, then debugging them and demonstrating that you understand how they work.

Organization: There are ten student workstations, each consisting of a set of electronic measuring instruments. You will work in pairs, using the same workstation throughout the semester, but sharing it with students belonging to the other lab sections. Individual experiments, on the other hand, are built up on circuit boards that your team keeps for the entire semester. This allows you to continue to work on your circuit for as long as you need to complete the work.

Physics 3330: Electronics for the Physical Sciences

A course calendar showing the lab and lecture plan for the semester and other useful information is posted on the course webpage. During the semester, announcements will be posted on the course web page and, if needed, sent to you by e-mail. In accordance with University policy, you are required to maintain and regularly check an e-mail account. You are also encouraged to use e-mail to communicate with the instructors.

Lab Sessions: Each section has one 3-hour instructional lab per week in Duane G-230, supervised by your lab instructor. You must attend your scheduled lab. The course will go much more smoothly (and quickly) for you if you are well prepared for each lab session so you can get most of the work done while your instructor is there to help. The lab is open for unsupervised work any time the building wing is open, and when no other section is meeting. Access will be via the eastern stairwell. These times are available for you to complete unfinished experiments or to explore your own ideas. Your Buff One Card will open the lab door. Please do not prop open the lab door or the hallway barrier door: doing so will result in a warning and then loss of keycard access to the lab.

Lectures: There will be a series of lectures on Tuesdays and Thursdays from 1:00 to 1:50 pm in Duane G125. We will be using iClicker remote transmitters for the class. They are the white iClicker (Radio Frequency Classroom Response System) ones, available in the CU bookstore. The material includes theoretical background that you will need to do the experiments as well as discussion of lab skills, such as creating a professional lab notebook. The schedule for the lectures is posted on the web site. The midterm exam will cover material from the lectures and from the labs.

Textbook: There is not a required textbook. Two of very useful references which you will likely need to consult at different times in the semester are The Art of Electronics, 2nd Edition by Horowitz and Hill and The Electronics Companion by A.C. Fischer-Cripps (IOP Press). Copies of these references are available in the lab room. A variety of manuals and specification sheets for particular electronic components will be essential and available through the course website.

Midterm Exam: There will be a midterm exam given approximately during Week 10 in the evening. We will advise about the exact date later in the semester. This exam will focus primarily on the theoretical material covered in the lectures as well as some practical knowledge that you are expected to have gained from the lab work.

Lab-prep: Preparation for the lab experiments is critical. Preparation will consist of two components. The first will be done using Mathematica where you will have to predict the response of the circuits you will build in lab. The second part will be addressing laboratory preparation as called for in the specific lab-guides. Lab-prep documents are due at midnight the evening before your lab and should be uploaded to the dropbox on D2L as well as brought to lab preferably on your laptop (or USB memory stick). Late submissions will NOT be accepted.

Lab Partners: You may perform the experiments either individually or with a partner. Groups larger than two are not permitted. If you work with a lab partner you should analyze the data separately and turn in separate Lab-prep and Lab notebook scans.

Physics 3330: Electronics for the Physical Sciences

Lab notebook: For details, please see the course website.

1. A lab notebook will be provided at the beginning of the course. You should bring the notebook to every lab including the times you work on your final project. Do not use loose sheets. If you ever forget to bring your notebook to the lab and have to use loose sheets instead, be sure to tape or glue these into your lab book as soon as possible.
2. Don't skip pages. Use them all. Write in ink. Don't erase mistakes, rather, box them and put a line through with short explanation e.g., 'Wrong!'. Do not tear out or remove pages.
3. Enter the date in your notebook when you start to work each day. Use a consistent format so it is easy to find the work that was done on a given day or a given experiment. Noting the time in your lab book for the start of specific experiments is also useful.
4. Keep a record of your data as well as of the experimental procedure, describing what you tried, what worked and what did not work etc.
5. Your lab book will be your main format for communicating what you did in the lab, your results, and scientifically argued conclusions. Make sure that you get your instructor's initials and date on your lab notebook before leaving the lab.
6. More details about keeping a complete lab notebook will be covered in lecture and at the beginning of the first lab section.

Final Project: The last four to five weeks of the semester are devoted to projects. You will use the skills you have learned to explore a topic of your choice. A list of projects from previous years is posted on the web site, just to give you some ideas. If you have an idea for a project at any time during the semester, by all means discuss it with your instructor and begin reading and collecting the materials you will need. This course is mostly about analog rather than digital electronics, because a good knowledge of analog is more important for laboratory scientists. We will discourage projects that are all or mostly digital. You may not incorporate high voltages into your final project without prior discussion with your lab section instructor. Your instructor may disallow or discontinue any project that uses high voltages if strict safety rules are not observed. The final project topic should be something you can build and allows you to utilize what you learned during the semester. Final project is worth 200 points total and will be assessed on five (5) different components:

1. Project proposal (40 pts)
2. Lab Notebooks (10 pts each/ 4 total, weeks 11-14)
3. Project Updates (10pts each / 2 total)
4. Oral Presentation (50 pts) will be the final Week of the course. Talks will be scheduled on a single day from 9 am to 5 pm. You should plan to give a computer-based presentation (e.g. PowerPoint, keynote etc.). The quality of your presentation will be graded in addition to the details of the project. Demonstration of your project to the class should also be the part of the presentation. More information on the presentation will be provided later in the term.
5. Project reports (50 pts) due on the last Week of the course. You must submit fully polished, typed documents with complete figures, diagram and data. If you work in team, you need to submit only one report per team but must specify the contributions of each member to building the project and to the write-up. The quality of writing will be graded in addition to the details of project.

Physics 3330: Electronics for the Physical Sciences

Grading: The grading will be based on a maximum of 1000 points.

Clicker questions (lectures)	40
Online Surveys (Week 1 and 15)	10 (5 pts each for participation)
Lab Skill Activities (online)	20 (2 x 10 pts each wks 1 & 2)
Lab-prep (Mathematica/ lab books)	90 (10 pts for each guided lab)
Lab participation	140 (10 pts for each week)
Lab notebooks	400 (40 pts for each guided lab)
Midterm exam	100
Final project	200 totals
Project proposal	40
Weekly progress	60
Lab Notebooks	40 pts (10 pts /week);
Project Presentations	20pts(2 x 10pt/ Presentation)
Final presentation	50
Final written report	50

Lab-prep is due midnight prior to your of your lab section (D2L dropbox).
Late lab-prep will not be given credit.

Lab notebook scans are due at midnight on Sunday for the Tuesday lab sections and midnight on Tuesday for the Thursday lab section. (D2L dropbox).

All assignments should be submitted as a SINGLE file, either a Mathematica notebook (.nb) or a PDF file (.pdf). The contents of the file must be legible and should be of reasonable size (generally less than a few MB). Before uploading to the drop box, please make sure to check your file after scanning to make sure it is complete and easy to read. It is not possible to delete a file that has been uploaded. Two suggested methods for scanning your notebooks are:

- using the scanner in G230. The easiest way is to place your document on the scanner and hit the PDF button (after making sure the computer is on). You can also double-click on the Canon Solutions Menu EX icon and click Start Application -> MP Navigator EX 4.0 -> PDF. Note that the top of the page to be scanned should be closest to you on the scanner. Otherwise your pages will be upside down. Once you have scanned the files, you can copy them to a USB stick or use Firefox to email them to yourself or upload to the drop box.
- using your phone to scan. One iPhone and Android option is GeniusScan, available at <http://thegrizzlylabs.com/> You can easily find other options as well. When using your phone, make sure to have good lighting and have the phone parallel to the paper to avoid parallax effects. Generally, scanning software will allow you to combine scans of individual pages into a single document (the scanning software in G230 and GeniusScan both do). However, if you find that you need to combine individual files to make a single PDF, there is software for that as well. Two examples of online tools are:
 - <http://smallpdf.com/merge-pdf>
 - <http://www.pdfmerge.com/>

If you are running MacOSX, you can combine files in Preview as documented here:
<http://support.apple.com/kb/HT4075>

Late lab notebook penalty: for labs that are submitted (via scanned lab book into D2L) that are less than 1 day late, 25% will be taken off your score, from 1 day to 1 week late 50% will be deducted. Lab notebook scans will NOT be accepted more than 1 week late. _____

Important Lab Rules:

1. If you are the last to leave the lab, first be sure to turn off all equipment, especially soldering irons and hot plates. Then close all windows and turn out the lights. Never prop the door open. Anyone who has authorization to use the lab will have access. The equipment is expensive and it would be very difficult to replace.
2. Before you leave the lab, clean up your mess. Your bench top should be totally clear except for the test equipment and the toolbox. Your own circuit boards and other equipment should be left on your labeled shelf in one of the storage cabinets. Communal equipment, including meters, stop watches, tools from the bench, cables, etc. should be returned to their storage locations.
3. Faults or damage that may occur to any instrument or non-trivial component should be reported to an instructor or to Michael Thomason (his phone number is posted in the lab). Label the offending item with a tag stating the nature of the fault to help us with repairs.

Other policies in accordance with the University

Disability issues: If you qualify for accommodations because of a disability, please submit to your professor a letter from Disability Services in a timely manner (for exam accommodations provide your letter at least one week prior to the exam) so that your needs can be addressed. Disability Services determines accommodations based on documented disabilities. Contact Disability Services at 303-492-8671 or by e-mail at dsinfo@colorado.edu. If you have a temporary medical condition or injury, see Temporary Medical Conditions: Injuries, Surgeries, and Illnesses guidelines under Quick Links at Disability Services website and discuss your needs with your professor.

Religious observances: Campus policy regarding religious observances requires that faculty make every effort to deal reasonably and fairly with all students who, because of religious obligations, have conflicts with scheduled exams, assignments or required attendance. See full details at http://www.colorado.edu/policies/fac_relig.html
Please contact us if you will miss a lecture or laboratory session due to a religious observance to arrange an appropriate remedy.

Classroom behavior: Students and faculty each have responsibility for maintaining an appropriate learning environment. Those who fail to adhere to such behavioral standards may be subject to discipline. Professional courtesy and sensitivity are especially important with respect to individuals and topics dealing with differences of race, color, culture, religion, creed, politics, veteran's status, sexual orientation, gender, gender identity and gender expression, age, disability, and nationalities. Class rosters are provided to the instructor with the student's legal name. I will gladly honor your request to address you by an alternate name or gender pronoun. Please advise me of this preference early in the semester so that I may make appropriate changes to my records. See policies at <http://www.colorado.edu/policies/classbehavior.html> and at http://www.colorado.edu/studentaffairs/judicialaffairs/code.html#student_code

Physics 3330: Electronics for the Physical Sciences

Honor code: DON'T CHEAT. All students of the University of Colorado at Boulder are responsible for knowing and adhering to the academic integrity policy of this institution. Violations of this policy may include: cheating, plagiarism, aid of academic dishonesty, fabrication, lying, bribery, and threatening behavior. All incidents of academic misconduct shall be reported to the Honor Code Council (honor@colorado.edu; 303-725-2273). Students who are found to be in violation of the academic integrity policy will be subject to both academic sanctions from the faculty member and non-academic sanctions (including but not limited to university probation, suspension, or expulsion). Other information on the Honor Code can be found at <http://www.colorado.edu/policies/honor.html> and <http://www.colorado.edu/academics/honorcode>.

Discrimination & sexual harassment: The University of Colorado Boulder (CU-Boulder) is committed to maintaining a positive learning, working, and living environment. The University of Colorado does not discriminate on the basis of race, color, national origin, sex, age, disability, creed, religion, sexual orientation, or veteran status in admission and access to, and treatment and employment in, its educational programs and activities. (Regent Law, Article 10, amended 11/8/2001). CU-Boulder will not tolerate acts of discrimination or harassment based upon Protected Classes or related retaliation against or by any employee or student. For purposes of this CU-Boulder policy, "Protected Classes" refers to race, color, national origin, sex, pregnancy, age, disability, creed, religion, sexual orientation, gender identity, gender expression, or veteran status. Individuals who believe they have been discriminated against should contact the Office of Discrimination and Harassment (ODH) at 303-492-2127 or the Office of Student Conduct (OSC) at 303-492-5550. Information about the ODH, the above referenced policies, and the campus resources available to assist individuals regarding discrimination or harassment can be obtained at <http://hr.colorado.edu/dh/>
